Art Unit: 1646

1) Claims 1 to 23, 28, 32, 33, 47, 52 and 72 are pending in the instant application. Claims 24 to 27, 29 to 31, 34 to 46, 48 to 51, 53 to 71 and 73 to 104 have been canceled as requested by Applicant in Paper Number 5, filed 29 August of 2001.

- 2) Claims 11 and 13 to 21 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

 Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. A properly dependant claim can not conceivably be infringed without infringing any of the claims from which it depends. See M.P.E.P. 608.01(n)III.
 - Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 to 7 and 12, drawn to an isolated polynucleotide and method of use, classified in class 435, subclass 69.1.
 - II. Claims 8 to 10, drawn to an isolated polypeptide, classified in class 530, subclass350.
 - III. Claim 11, drawn to an antibody, classified in class 530, subclass 388.22.
 - IV. Claims 13, 14, 32 and 33, drawn to a method of detecting a polypeptide in a sample, classified in class 436, subclass 501.
 - V. Claim 15, drawn to a kit comprising a compound of unspecified constitution which specifically binds to a polypeptide, classified in class 530, subclass 388.22, for example.

Application/Control Number: 09/942,374

Art Unit: 1646

VI. Claims 16, 17, 23, 28 and 47, in so far as they are drawn to a kit containing a nucleic acid probe and a method of detecting a nucleic acid in a sample, classified in class 435, subclass 6.

Page 3

- VII. Claims 19, 20, 22, 47 and 52, in so far as they are drawn to a receptor binding assay, classified in class 435, subclass 7.21, for example.
- VIII. Claim 21, drawn to a method of modulating the activity of a protein by administering a compound of unspecified constitution, classification undeterminable.

The inventions are distinct, each from the other because:

The polynucleotide that is invention I, the polypeptide that is invention II, the antibody that is invention III, the binding agent of unspecified constitution that is invention V and the polynucleotide probe that is invention VI are five structurally and functionally different chemical compounds each of which can be made and used without any one or more of the other compounds. Lack of unity is shown because these compounds lack a common utility which is based upon a common structural feature which has been identified as the basis for that common utility.

Inventions III and V are related to inventions IV and VIII as products and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown:

(1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that

Application/Control Number: 09/942,374

Page 4

Art Unit: 1646

product (MPEP § 806.05(h)). In the instant case the products that are inventions III and V can be used in the two materially different processes that are inventions IV and IX. The processes of inventions IV and IX are materially different because they achieve different objects by employing different method steps. Inventions are materially different if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

The host cell included in invention I and the isolated polypeptide of invention II are each related to the binding assay of invention VII as product and process of use. They are shown to be distinct because the process, as claimed, can be practiced with either an intact cell or an isolated protein, which are two materially different products.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Application/Control Number: 09/942,374

Art Unit: 1646

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John D. Ulm whose telephone number is (703) 308-4008. The examiner can normally be reached on Monday through Friday from 9:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler can be reached at (703) 308-6564.

Official papers filed by fax should be directed to (703) 308-4242 or (703) 872-9306. Official responses under 37 C.F.R. § 1.116 should be directed to (703) 872-9307.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
